Rad Health/ Land Survey

Land/Tech Corporation  
Eddie C. Diaz, President  
2003 Pan Am Circle  
Tampa, Florida 33607

Dear Sir:

This letter is in response to yours requesting clarification of this agency's role in resolving the problem associated with development of the surveyed property. This agency is prepared to act as a consultant and furnish the necessary testing required associated with the problem in question. Since the levels of radiation are not uniformly high across the properties, we feel that with proper selection of sites it may be possible to eliminate or certainly minimize the radon levels that would be found in any proposed structure. Where proper site selection is not a feasible answer, we would most likely recommend excavation and backfill of the area beneath the foundation of a structure. Where neither of the above steps would prove to be satisfactory due to higher levels of radiation or the cost involved, we would recommend certain structural changes to be made in the building. Enclosed you will find a copy covering the controlled technology associated with this type problem.

In reviewing this booklet please make note of the fact that the polymeric sealance that are mentioned have since proven to be unsatisfactory in the control of this problem. Once again let me say that we will be glad to work with you on a consulting and testing basis in order that you might "build out" this problem during development.

Sincerely,

Donald R. Guthrie, P.E.  
Sanitary Engineer
